

April 6A Gr.8: Interaction of Force and Mass

Content Area: **Science**
Course(s):
Time Period: **April**
Length: **1 Weeks**
Status: **Published**

Unit Overview

A game of tug-of-war illustrates why the rope moves toward the stronger team: The force of pull is stronger on that side. In this concept, you will learn about the interaction of force and mass.

Enduring Understandings

Lesson Objectives

By the end of the lesson, students should be able to:

- Describe and identify an unbalanced force.
- Predict how an object will move when it is acted on by an unbalanced force.
- Describe and classify forces that can act on an object.

Essential Questions

- **Overarching Question**
 - How can one explain and predict interactions between objects and within systems of objects?
- **Focus Question**
 - How can one predict an object's continued motion, changes in motion, or stability?
- **Lesson Questions**
 - What happens when two unbalanced forces act on an object?
 - What kinds of forces can act on an object?
- **Can You Explain?**
 - How does the mass of an object affect the outcome when an unbalanced force acts on it?

Instructional Strategies & Learning Activities

- [The Five E Instructional Model](#)

Science Techbook follows the 5E instructional model. As you plan your lesson, the provided Model Lesson includes strategies for each of the 5Es.

- [Engage \(45–90 minutes\)](#)

Students are presented with the phenomena of inertia when a moving object strikes another object. Students begin to formulate ideas around the Can You Explain? (CYE) question.

- [Explore \(90 minutes\)](#)

Students investigate questions about how forces interact with objects by using evidence from text and media assets.

- [Explain \(45–90 minutes\)](#)

Students construct scientific explanations to the CYE question by including evidence of how objects interact under the force of inertia.

- [Elaborate with STEM \(45–135 minutes\)](#)

Students apply their understanding of the interaction between force and mass as they learn how engineers design cars and spacecraft.

- [Evaluate \(45–90 minutes\)](#)

Students are evaluated on the state science standards, as well as Standards in ELA/Literacy and Standards in Math standards, using Board Builder and the provided concept summative assessments.

Integration of Career Readiness, Life Literacies and Key Skills

Students will work in small groups or partnerships to conduct investigations, build models or prototypes and present findings.

Students will learn about careers in engineering cars and spacecraft.

Digital tools make it possible to analyze and interpret data, including text, images, and sound. These tools allow for broad concepts and data to be more effectively communicated.

WRK.9.2.8.CAP.15	<p>Present how the demand for certain skills, the job market, and credentials can determine an individual's earning power.</p> <p>An individual's strengths, lifestyle goals, choices, and interests affect employment and income.</p> <p>Gathering and evaluating knowledge and information from a variety of sources, including global perspectives, fosters creativity and innovative thinking.</p> <p>Increases in the quantity of information available through electronic means have heightened the need to check sources for possible distortion, exaggeration, or misrepresentation.</p> <p>Multiple solutions often exist to solve a problem.</p>
WRK.9.2.8.CAP.3	<p>Explain how career choices, educational choices, skills, economic conditions, and personal behavior affect income.</p>
TECH.9.4.8.CT.3	<p>Compare past problem-solving solutions to local, national, or global issues and analyze the factors that led to a positive or negative outcome.</p>
TECH.9.4.8.CI	<p>Creativity and Innovation</p>
TECH.9.4.8.IML.1	<p>Critically curate multiple resources to assess the credibility of sources when searching for information.</p>
TECH.9.4.8.CT	<p>Critical Thinking and Problem-solving</p>
WRK.9.2.8.CAP.2	<p>Develop a plan that includes information about career areas of interest.</p>
TECH.9.4.8.IML.3	<p>Create a digital visualization that effectively communicates a data set using formatting techniques such as form, position, size, color, movement, and spatial grouping (e.g., 6.SP.B.4, 7.SP.B.8b).</p>
WRK.9.2.8.CAP	<p>Career Awareness and Planning</p>
WRK.9.2.8.CAP.1	<p>Identify offerings such as high school and county career and technical school courses, apprenticeships, military programs, and dual enrollment courses that support career or occupational areas of interest.</p> <p>An essential aspect of problem solving is being able to self-reflect on why possible solutions for solving problems were or were not successful.</p>

Technology Integration

Technology is fully integrated using Discovery Techbook.

CS.6-8.8.2.8.ED.3	<p>Develop a proposal for a solution to a real-world problem that includes a model (e.g., physical prototype, graphical/technical sketch).</p>
CS.6-8.8.2.8.ED.4	<p>Investigate a malfunctioning system, identify its impact, and explain the step-by-step process used to troubleshoot, evaluate, and test options to repair the product in a collaborative team.</p>
CS.6-8.8.2.8.ITH.2	<p>Compare how technologies have influenced society over time.</p> <p>Engineering design is a systematic, creative, and iterative process used to address local and global problems. The process includes generating ideas, choosing the best solution, and making, testing, and redesigning models or prototypes.</p>
CS.6-8.8.2.8.ITH.1	<p>Explain how the development and use of technology influences economic, political, social, and cultural issues.</p>
CS.6-8.ED	<p>Engineering Design</p>
CS.6-8.8.2.8.ED.2	<p>Identify the steps in the design process that could be used to solve a problem.</p>

Engineering design requirements and specifications involve making trade-offs between competing requirements and desired design features.

Interdisciplinary Connections

LA.SL.8.4	Present claims and findings, emphasizing salient points in a focused, coherent manner with relevant evidence, sound valid reasoning, and well-chosen details; use appropriate eye contact, adequate volume, and clear pronunciation.
LA.RI.8.1	Cite the textual evidence and make relevant connections that most strongly supports an analysis of what the text says explicitly as well as inferences drawn from the text.
LA.W.8.1	Write arguments to support claims with clear reasons and relevant evidence.
LA.RI.8.4	Determine the meaning of words and phrases as they are used in a text, including figurative, connotative, and technical meanings; analyze the impact of specific word choices on meaning and tone, including analogies or allusions to other texts.
LA.W.8.7	Conduct short research projects to answer a question (including a self-generated question), drawing on several sources and generating additional related, focused questions that allow for multiple avenues of exploration.
LA.RI.8.7	Evaluate the advantages and disadvantages of using different mediums (e.g., print or digital text, video, multimedia) to present a particular topic or idea.
LA.W.8.2	Write informative/explanatory texts to examine a topic and convey ideas, concepts, and information through the selection, organization, and analysis of relevant content.
LA.RI.8.8	Delineate and evaluate the argument and specific claims in a text, assessing whether the reasoning is sound and the evidence is relevant and sufficient; recognize when irrelevant evidence is introduced.
LA.RI.8.10	By the end of the year read and comprehend literary nonfiction at grade level text-complexity or above, with scaffolding as needed.
LA.SL.8.1	Engage effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grade 8 topics, texts, and issues, building on others' ideas and expressing their own clearly.

Differentiation

Struggling Students

1. Using a two-column chart, ask students to compare and contrast mass and weight, balanced and unbalanced forces, and velocity and acceleration.
2. Have students pause each video when a key vocabulary word, such as *inertia*, *action*, or *balance* is mentioned, and have them record how the word is used in the

ELL

1. Have students write down the mathematical representation of the terms *mass*, *gravity*, *weight*, *force*, and *inertia* to help distinguish these terms and the relationships among them.
2. Encourage students to demonstrate their understanding by drawing concepts. For example, they can illustrate what happens when a heavy truck and light

Accelerated Students

1. Before they read the Core Interactive Text, have students use their previous knowledge of force and mass to predict how the mass of an object affects what happens when it is struck by another object.
2. Challenge students to identify instances of inertia at work in their daily lives.

video's context.

car hit each other at different speeds.

[Differentiation in science](#) can be accomplished in several ways. Once you have given a pre-test to students, you know what information has already been mastered and what they still need to work on. Next, you design activities, discussions, lectures, and so on to teach information to students. The best way is to have two or three groups of students divided by ability level.

While you are instructing one group, the other groups are working on activities to further their knowledge of the concepts. For example, while you are helping one group learn the planet names in order, another group is researching climate, size, and distance from the moon of each planet. Then the groups switch, and you instruct the second group on another objective from the space unit. The first group practices writing the order of the planets and drawing a diagram of them.

Here are some ideas for the classroom when you are using differentiation in science:

- Create a tic-tac-toe board that lists different activities at different ability levels. When students aren't involved in direct instruction with you, they can work on activities from their tic-tac-toe board. These boards have nine squares, like a tic-tac-toe board; and each square lists an activity that corresponds with the science unit. For example, one solar system activity for advanced science students might be to create a power point presentation about eclipses. For beginning students, an activity might be to make a poster for one of the planets and include important data such as size, order from the sun, whether it has moons, and so on.
- Find websites on the current science unit that students can explore on their own.
- Allow students to work in small groups to create a project throughout the entire unit. For example, one group might create a solar system model to scale. Another group might write a play about the solar system. This is an activity these groups can work on while they are not working directly with you.

Differentiation in science gets students excited to learn because it challenges them to expand their knowledge and skills, instead of teaching the whole group concepts they have already mastered

Modifications & Accommodations

Refer to QSAC EXCEL SMALL SPED ACCOMMODATIONS spreadsheet in this discipline.

Modifications and Accommodations used in this unit:

In addition to differentiated instruction, IEP's and 504 accommodations will be utilized.

In addition to differentiated instruction, IEP's and 504 accommodations will be utilized.

Benchmark Assessments

Benchmark Assessments are given periodically (e.g., at the end of every quarter or as frequently as once per month) throughout a school year to establish baseline achievement data and measure progress toward a standard or set of academic standards and goals.

Schoolwide Benchmark assessments:

Aimsweb benchmarks 3X a year

Linkit Benchmarks 3X a year

Additional Benchmarks used in this unit:

Pre and post assessments to measure growth.

Formative Assessments

Assessment allows both instructor and student to monitor progress towards achieving learning objectives, and can be approached in a variety of ways. **Formative assessment** refers to tools that identify misconceptions, struggles, and learning gaps along the way and assess how to close those gaps. It includes effective tools for helping to shape learning, and can even bolster students' abilities to take ownership of their learning when they understand that the goal is to improve learning, not apply final marks (Trumbull and Lash, 2013). It can include students assessing themselves, peers, or even the instructor, through writing, quizzes, conversation, and more. In short, formative assessment occurs throughout a class or course, and seeks to improve student achievement of learning objectives through approaches that can support specific student needs (Theal and Franklin, 2010, p. 151).

Formative Assessments used in this unit:

See assessments located in links above.

Summative Assessments

Summative assessments evaluate student learning, knowledge, proficiency, or success at the conclusion of an instructional period, like a unit, course, or program. Summative assessments are almost always formally graded and often heavily weighted (though they do not need to be). Summative assessment can be used to great effect in conjunction and alignment with formative assessment, and instructors can consider a variety of

ways to combine these approaches.

Summative assessments for this unit:

See assessments located in links above.

Instructional Materials

See materials located in links above.

Discovery Techbook

Teacher made materials

Additional labs are available through NJCTL on-line curriculum

Standards

	All positions of objects and the directions of forces and motions must be described in an arbitrarily chosen reference frame and arbitrarily chosen units of size. In order to share information with other people, these choices must also be shared.
SCI.MS-PS2	Motion and Stability: Forces and Interactions Emphasis is on balanced (Newton's First Law) and unbalanced forces in a system, qualitative comparisons of forces, mass and changes in motion (Newton's Second Law), frame of reference, and specification of units. Explanations of stability and change in natural or designed systems can be constructed by examining the changes over time and forces at different scales.
SCI.MS.PS2.A	Forces and Motion
SCI.MS.PS2.B	Types of Interactions
SCI.MS-PS2-4	Construct and present arguments using evidence to support the claim that gravitational interactions are attractive and depend on the masses of interacting objects. Assessment is limited to forces and changes in motion in one-dimension in an inertial reference frame and to change in one variable at a time. Assessment does not include the use of trigonometry.
SCI.MS-PS2-2	Plan an investigation to provide evidence that the change in an object's motion depends on the sum of the forces on the object and the mass of the object. The motion of an object is determined by the sum of the forces acting on it; if the total force on the object is not zero, its motion will change. The greater the mass of the object, the greater the force needed to achieve the same change in motion. For any given object, a larger force causes a larger change in motion.
