# MP1a-Expressions, Equations, and Functions <br> Content Area: Course(s): Time Period: Length: <br> Status: <br> Math <br> Math 8 Algebra 1 Honors <br> Marking Period 1 <br> MP1 <br> Published 

## Essential Questions

- How can mathematical ideas be represented?

## Big Ideas

- Reason quantitatively and use units to solve problems.
- Interpret the structure of expressions.
- Create equations that describe numbers or relationships.
- Solve equations and inequalities in one variable.
- Represent and solve equations and inequalities graphically.
- Understand the concept of a function and use function notation.
- Interpret functions that arise in applications in terms of the context.
- Analyze functions using different representations.

## Technology Integration

8.1.8.A.5 Create a database query, sort and create a report and describe the process, and explain the report results.
8.1.8.B. 1 Synthesize and publish information about a local or global issue or event (ex. telecollaborative project, blog, school web).
8.1.8.E. 1 Effectively use a variety of search tools and filters in professional public databases to find information to solve a real world problem.
8.1.8.C. 1 Collaborate to develop and publish work that provides perspectives on a global problem for discussions with learners from other countries.

Activity:
The ant game is used during Arithmetic Sequence practice in station rotation. Students are given the opportunity to practice solving arithmetic sequences in a game to meet the learning objective of solving
arithmetic sequences.

## Career Education Integration

9.2.8.B.3 Evaluate communication, collaboration, and leadership skills that can be developed through school, home, work, and extracurricular activities for use in a career.
9.2.8.B. 4 Evaluate how traditional and nontraditional careers have evolved regionally, nationally, and globally.
9.2.8.B.5 Analyze labor market trends using state and federal labor market information and other resources available online.
9.2.8.B. 6 Demonstrate understanding of the necessary preparation and legal requirements to enter he workforce.

## Connection:

Students are expected to apply ration and proportions to real world situations - this can be applied to a variety of career choices. Students can create equations based upon different labor market trends and career path decisions.
N.Q. 3 Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.

## Enduring Understandings

## Seeing Structure in Expressions

A.SSE.1a [M] Interpret parts of an expression, such as terms, factors, and coefficients.
A.SSE. 1 b [M] Interpret complicated expressions by viewing one or more of their parts as a single entity. For example, interpret $\mathrm{P}(1+\mathrm{r}) \mathrm{n}$ as the product of P and a factor not depending on P
A.SSE. 2 Use the structure of an expression to identify ways to rewrite it. For example, see $\mathrm{x} 4-\mathrm{y} 4$ as $(\mathrm{x} 2) 2-(\mathrm{y} 2) 2$, thus recognizing it as a difference of squares that can be factored as $(x 2-y 2)(x 2+y 2)$.

## Creating Equations

A.CED. 1 Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and quadratic functions, and simple rational and exponential functions.
A.CED. 2 Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales.

## Reasoning with Equations \& Inequalities

A.REI. 10 [M] Understand that the graph of an equation in two variables is the set of all its solutions plotted in the coordinate plane, often forming a curve (which could be a line).
A.REI. 3 Solve linear equations and inequalities in one variable, including equations with coefficients represented by letters.

## Interpreting Functions

F.IF. 1 [M] Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If $f$ is a function and $x$ is an element of its domain, then $f(x)$ denotes the output of $f$ corresponding to the input $x$. The graph of $f$ is the graph of the equation $\mathrm{y}=\mathrm{f}(\mathrm{x})$.
F.IF. 2 Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.
F.IF. 4 For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.
F.IF. 9 Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.

## Mathematical Practices Focus

1. Make sense of problems and persevere in solving them. Lessons, 0-1,1-8, 2-4, 3-4, 4-5, 5-4, 6-4, 7-5, 8-8, 93, 10-5, 11-1, 12-4
2. Reason abstractly and quantitatively. Lessons $1-3,2-1,3-3,4-1,5-1,6-5,7-2,8-5,9-1,10-3,11-8,12-2$
3. Construct viable arguments and critique the reasoning of others. Lessons 1-3, 2-5, 3-5, 4-2, 5-5, 6-1, 7-4, 81, 9-2, 10-4, 11-2, 12-1
4. Model with mathematics. Lessons 1-1, 2-9, 3-2, 4-5, 5-1, 6-5, 7-6, 8-7, 9-7, 10-4, 11-7, 12-5
5. Use appropriate tools strategically. Lessons 1-7, 2-4, 3-2, 4-4, 5-6, 6-1, 7-5, 8-2, 9-6, 10-6, 11-8, 12-3
6. Attend to precision. Lessons 1-3, 2-8, 3-4, 4-2, 5-2, 6-6, 7-4, 8-9, 9-5, 10-11, 11-6, 12-2
7. Look for and make use of structure. Lessons 1-2, 2-5, 3-6, 4-1, 5-5, 6-3, 7-7, 8-6, 9-6, 10-2, 11-2, 12-8
8. Look for and express regularity in repeated reasoning. Lessons 1-4, 2-7, 3-1, 4-1, 5-4, 6-1, 7-1, 8-4, 9-3, 102, 11-5, 12-6
