# Unit 3a-Fractions Equivalence and Comparison 

| Content Area: | Mathematics |
| :--- | :--- |
| Course(s): | Math $\mathbf{3}$ |
| Time Period: | Marking Period 3 |
| Length: | MP3 Topic 13 13-1 to 13-8 |
| Status: | Published |

## Essential Questions

- What are different ways to compare fractions?

## Big Ideas

- Build on the Concept of Unit Fractions- Students understand that fractions are parts of a whole.
- Fraction Representations- Fraction concepts are developed and reinforced using diagrams of positioned regions, fraction bars, and number lines.

## Technology Connection

8.1.5.DA.2: Compare the amount of storage space required for different types of data

## Enduring Understandings

3.NF.A [M] Develop understanding of fractions as numbers
3.NF.A.3a Understand two fractions as equivalent (equal) if they are the same size, or the same point on a number line.
3.NF.A.3b Recognize and generate simple equivalent fractions, e.g., $1 / 2=2 / 4,4 / 6=2 / 3$ ). Explain why the fractions are equivalent, e.g., by using a visual fraction model.
3.NF.A.3c Express whole numbers as fractions, and recognize fractions that are equivalent to whole numbers. Examples: Express 3 in the form $3=3 / 1$; recognize that $6 / 1=6$; locate $4 / 4$ and 1 at the same point of a number line diagram.
3.NF.A.3d Compare two fractions with the same numerator or the same denominator by reasoning about their size. Recognize that comparisons are valid only when the two fractions refer to the same whole. Record the results of comparisons with the symbols $>,=$, or $<$, and justify the conclusions, e.g., by using a visual fraction model.

## Mathematical Practices Focus

3. Construct viable arguments and critique the reasoning of others.
