# **08-Mathematical Practices**

Content Area:	Math
Course(s):	
Time Period:	Full Year
Length:	Ongoing
Status:	Published

#### General Overview, Course Description or Course Philosophy

Mathematical information may be organized or presented graphically, numerically, analytically, or verbally. Mathematicians must be able to communicate effectively in all of these contexts and transition seamlessly from one representation to another. These standards must be consistently applied in order to achieve competence and fluency.

# **OBJECTIVES, ESSENTIAL QUESTIONS, ENDURING UNDERSTANDINGS**

Enduring Understandings:

- Adaptive reasoning, strategic competence, conceptual understanding, procedural fluency, and productive discourse contribute positively to mathematical success.
- It is important to determine expressions and values using mathematical procedures and rules.
- Ihey must be able to translate mathematical information from a single representation or across multiple representations.
- Justification of reasoning and solutions is an integral component of successful work.
- Must always use correct notation, language, and mathematical conventions to communicate results or solutions.

**Essential Questions:** 

- How do you apply reasoning with definitions and theorems?
- How do you connect concepts?
- How do you implement algebraic/computational processes?
- How so you connect multiple representations?
- How do you build notational fluency?
- How do you communicate mathematics to others?

#### CONTENT AREA STANDARDS A.CED

A. Create equations that describe numbers or relationships

#### A.REI

- A. Understand solving equations as a process of reasoning and explain the reasoning
- B. Solve equations and inequalities in one variable

C. Solve systems of equations

D. Represent and solve equations and inequalities graphically

#### A.SSE

- A. Interpret the structure of expressions
- B. Write expressions in equivalent forms to solve problems

#### **HS** Functions

#### F.BF

- A. Build a function that models a relationship between two quantities
- B. Build new functions from existing functions

#### F.IF

- A. Understand the concept of a function and use function notation
- B. Interpret functions that arise in applications in terms of the context
- C. Analyze functions using different representations

#### F.LE

- A. Construct and compare linear and exponential models and solve problems
- B. Interpret expressions for functions in terms of the situation they model

# F.TF

A. Extend the domain of trigonometric functions using the unit circle

#### B. Model periodic phenomena with trigonometric functions

#### C. Prove and apply trigonometric identities

MA.9-12.MPAC	Mathematical Practices for AP Calculus (MPACs)
MA.9-12.MPAC 1	Reasoning with definitions and theorems
MA.9-12.MPAC 4	Connecting multiple representations
MA.9-12.MPAC 3	Implementing algebraic/computational processes
MA.9-12.MPAC 2	Connecting concepts
MA.9-12.MPAC 6	Communicating
MA.9-12.MPAC 4.a	associate tables, graphs, and symbolic representations of functions;
MA.9-12.MPAC 1.a	use definitions and theorems to build arguments, to justify conclusions or answers, and to prove results.
MA.9-12.MPAC 3.a	select appropriate mathematical strategies;
MA.9-12.MPAC 6.a	clearly present methods, reasoning, justifications, and conclusions;
MA.9-12.MPAC 5.a	know and use a variety of notations (e.g., $f'(x)$ , $y'$ , $dx/dy$ );
MA.9-12.MPAC 2.a	relate the concept of a limit to all aspects of calculus;
MA.9-12.MPAC 1.b	confirm that hypotheses have been satisfied in order to apply the conclusion of a theorem;
MA.9-12.MPAC 4.b	develop concepts using graphical, symbolical, verbal, or numerical representations with and without technology;
MA.9-12.MPAC 2.b	use the connection between concepts (e.g., rate of change and accumulation) or processes (e.g., differentiation and its inverse process, antidifferentiation) to solve problems;
MA.9-12.MPAC 3.b	sequence algebraic/computational procedures logically;
MA.9-12.MPAC 5.b	connect notation to definitions (e.g., relating the notation for the definite integral to that of the limit of a Riemann sum);
MA.9-12.MPAC 6.b	use accurate and precise language and notation;
MA.9-12.MPAC 6.c	explain the meaning of expressions, notation, and results in terms of a context (including units);
MA.9-12.MPAC 2.c	connect concepts to their visual representations with and without technology; and
MA.9-12.MPAC 1.c	apply definitions and theorems in the process of solving a problem;
MA.9-12.MPAC 3.c	complete algebraic/computational processes correctly;
MA.9-12.MPAC 5.c	connect notation to different representations (graphical, numerical, analytical, and verbal); and
MA.9-12.MPAC 4.c	identify how mathematical characteristics of functions are related in different representations;
MA.9-12.MPAC 6.d	explain the connections among concepts;

MA.9-12.MPAC 4.d	extract and interpret mathematical content from any presentation of a function (e.g., utilize information from a table of values);
MA.9-12.MPAC 1.d	interpret quantifiers in definitions and theorems (e.g., "for all," "there exists");
MA.9-12.MPAC 2.d	identify a common underlying structure in problems involving different contextual situations.
MA.9-12.MPAC 3.d	apply technology strategically to solve problems;
MA.9-12.MPAC 5.d	assign meaning to notation, accurately interpreting the notation in a given problem and across different contexts.
MA.9-12.MPAC 1.e	develop conjectures based on exploration with technology; and
MA.9-12.MPAC 3.e	attend to precision graphically, numerically, analytically, and verbally and specify units of measure; and
MA.9-12.MPAC 4.e	construct one representational form from another (e.g., a table from a graph or a graph from given information); and
MA.9-12.MPAC 6.e	critically interpret and accurately report information provided by technology; and
MA.9-12.MPAC 6.f	analyze, evaluate, and compare the reasoning of others.
MA.9-12.MPAC 4.f	consider multiple representations (graphical, numerical, analytical, and verbal) of a function to select or construct a useful representation for solving a problem.
MA.9-12.MPAC 1.f	produce examples and counterexamples to clarify understanding of definitions, to investigate whether converses of theorems are true or false, or to test conjectures.
MA.9-12.MPAC 3.f	connect the results of algebraic/computational processes to the question asked.

# **RELATED STANDARDS (Technology, 21st Century Life & Careers, ELA Companion Standards are Required)**

9.1.12.PB.3: Design a personal budget that will help you reach your long-term and short-term financial goals. • 9.1.12.PB.4: Explain how you would revise your budget to accommodate changing circumstances. • 9.1.12.PB.5: Analyze how changes in taxes, inflation, and personal circumstances can affect a personal budget. Money management requires understanding of cash flow systems and business practices. 9.1.12.PB.6: Describe and calculate interest and fees that are applied to various forms of spending, debt and saving.

CRP.K-12.CRP2	Apply appropriate academic and technical skills.
CRP.K-12.CRP4	Communicate clearly and effectively and with reason.
CRP.K-12.CRP6	Demonstrate creativity and innovation.
CRP.K-12.CRP8	Utilize critical thinking to make sense of problems and persevere in solving them.
CRP.K-12.CRP12	Work productively in teams while using cultural global competence.
TECH.8.1.12.E	Research and Information Fluency: Students apply digital tools to gather, evaluate, and use information.
TECH.8.1.12.F	Critical thinking, problem solving, and decision making: Students use critical thinking skills to plan and conduct research, manage projects, solve problems, and make informed decisions using appropriate digital tools and resources.

# **STUDENT LEARNING TARGETS**

# **Declarative Knowledge**

Students will understand that:

- Applying problem solving steps and strategies based on the context can increase efficiency and accuracy while assisting with the development of conceptual understanding
- Applying mathematical tools based on the context can increase efficiency and accuracy while assisting with the development of conceptual understanding
- Mathematical modeling and varied representations of mathematical situations assists with the development of conceptual understanding

# **Procedural Knowledge**

Students will be able to:

Apply reasoning with definitions and theorems by

- using definitions and theorems to build arguments, to justify conclusions or answers, and to prove results;
- confirming that hypotheses have been satisfied in order to apply the conclusion of a theorem;
- applying definitions and theorems in the process of solving a problem;
- interpreting quantifiers in definitions and theorems (e.g., "for all," "there exists");
- developing conjectures based on exploration with technology; and
- producing examples and counterexamples to clarify understanding of definitions, investigate whether converses of theorems are true or false, or to test conjectures

Connect concepts by:

- relating the concept of a limit to all aspects of calculus;
- using the connection between concepts (e.g., rate of change and accumulation) or processes (e.g., differentiation and its inverse process, antidifferentiation) to solve problems;
- connecting concepts to their visual representations with and without technology; and
- identifying a common underlying structure in problems involving different contextual situations.

Implement algebraic/computational processes by:

- selecting appropriate mathematical strategies;
- sequencing algebraic/computational procedures logically;
- completing algebraic/computational processes correctly;
- applying technology strategically to solve problems;
- attending to precision graphically, numerically, analytically, and verbally and specify units of measure; and
- connecting the results of algebraic/computational processes to the question asked

Connect multiple representations by:

- associating tables, graphs, and symbolic representations of functions;
- developing concepts using graphical, symbolical, verbal, or numerical representations with and without technology;
- identifying how mathematical characteristics of functions are related in different representations;
- extracting and interpreting mathematical content from any presentation of a function (e.g., utilize information from a table of values);
- constructing one representational form from another (e.g., a table from a graph or graph from given information); and
- considering multiple representations (graphical, numerical, analytical, and verbal of a function to select or construct a useful representation for solving a problem.

Build notational fluency by:

- knowing and use a variety of notations
- connecting notation to definitions (e.g., relating the notation for the definite integral to that of the limit of a Riemann sum);
- connecting notation to different representations (graphical, numerical, analytical, and verbal); and assigning meaning to notation, accurately interpreting the notation in a given problem and across different content

Communicate by:

- clearly presenting methods, reasoning, justifications, and conclusions;
- using accurate and precise language and notation;
- explaining the meaning of expressions, notation, and results in terms of a contex (including units);
- explaining the connections among concepts;
- critically interpreting and accurately reporting information provided by technology; and
- analyzing, evaluating, and comparing the reasoning of others.

# **EVIDENCE OF LEARNING**

# **Benchmark Assessments**

Benchmark Assessments conducted three times per year, using Pear Assessment (Standards Based Assessments)

#### **Alternate Assessments**

Portfolios

- Verbal Assessment (instead of written)
- Multiple choice
- Modified Rubrics
- Performance Based Assessments

# **Formative Assessments**

- Teacher observations, student-student discussions, conferences
- Explain the process used to solve the problem
- Identify the theorems and defintions used in order to solve the problem

# **Summative Assessments**

N/A

# **RESOURCES (Instructional, Supplemental, Intervention Materials)**

- Core Instructional Materials
  - o Calculus Early Transcendentals, Anton, Bivens, and Davis
  - $\circ\,$  Calculus, Farrand and Poxon
  - Solutions at
    - https://www.slader.com/textbook/9780470647691-calculus-early-transcendentals-10thedition/
    - https://ia801309.us.archive.org/23/items/Calculus10thEditionH.Anton/Calculus%2010t h%20edition%20H.%20Anton.pdf

#### Supplemental Materials

- o TI-84 Graphing calculator
- o Teacher designed worksheets
- o https://tutorial.math.lamar.edu/classes/calci/calci.aspx
- o https://www.khanacademy.org/math/old-ap-calculus-ab/ab-limits-continuity

# INTERDISCIPLINARY CONNECTIONS

Mathematics is used in many other disciplines in order to develop hypotheses and to substantiatiate conclusions.

These disciplines include:

- Astronomy
- Biology
- Economics
- Engineering
- Medicine
- Physics

# **ACCOMMODATIONS & MODIFICATIONS FOR SUBGROUPS**

See link to Accommodations & Modifications document in course folder.
