

GRADE 4– Unit 1: Earth Features & Processes

Mission Statement

The primary goal of the Swedesboro-Woolwich School District is to prepare each student with the real life skills needed to compete in a highly competitive global economy. This will be achieved by providing a comprehensive curriculum, the integration of technology, and the professional services of a competent and dedicated faculty, administration, and support staff.

Guiding this mission will be Federal mandates, including No Child Left Behind, the New Jersey Core Curriculum Content Standards, and local initiatives addressing the individual needs of our students as determined by the Board of Education. The diverse resources of the school district, which includes a caring PTO and active adult community, contribute to a quality school system. They serve an integral role in supporting positive learning experiences that motivate, challenge and inspire children to learn.

Unit/Module Overview

In this unit, students investigate features and processes of the Earth's surface. Students explore the rapid process of volcanic eruptions! In contrast, students also explore the gradual Earth processes of weathering and erosion. Students apply their knowledge and design solutions to mitigate the impacts of these processes on humans.

Standards Covered in Current Unit/Module
Related Standards and Learning Goals
<p style="text-align: center;"><u>STANDARDS</u></p> <p><u>SCI.4-ESS1-1</u> Identify evidence from patterns in rock formations and fossils in rock layers to support an explanation for changes in a landscape over time.</p> <p><u>SCI.4-ESS2-1</u> Make observations and/or measurements to provide evidence of the effects of weathering or the rate of erosion by water, ice, wind, or vegetation.</p> <p><u>SCI.4-ESS2-2</u> Analyze and interpret data from maps to describe patterns of Earth's features.</p> <p><u>SCI.4-ESS3-2</u> Generate and compare multiple solutions to reduce the impacts of natural Earth processes and climate change have on humans.</p> <p><u>SCI.3-5-ETS1-2</u> Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem.</p> <p style="text-align: center;"><u>LEARNING GOALS</u></p>

Lesson 1: Volcanoes & Patterns of Earth's Features

I can analyze and interpret data from maps to describe patterns of the Earth's Surface.

Lesson 2: Volcanoes & Rock Cycle

I can explain the cause and effect of changes in a landscape over time and different rock formations / fossils in rock layers.

Lesson 3: Weathering & Erosion

I can explain the cause and effect between changes in rock / landscapes and the effects of weathering or the rate of erosion by water, ice, wind, or vegetation.

Lesson 4: Sedimentary Rock & Fossils

I can explain how patterns in rock formations and fossils in rock layers show changes in a landscape over time.

Lesson 5: Erosion, Natural Hazards & Engineering

I can explain the cause of natural Earth processes / climate change and the effect they have on humans.

I can generate and compare solutions to a problem, the criteria and constraints of the problem.
