

Energy

Content Area: **Science**
Course(s): **Science 6**
Time Period: **December**
Length: **5 weeks**
Status: **Published**

Energy Overview

Over a 5 week period, students will apply ideas about gravitational, electrical, and magnetic forces to explain a variety of phenomena including beginning ideas about why some materials attract each other while others repel. In particular, students develop understandings that gravitational interactions are always attractive but that electrical and magnetic forces can be both attractive and negative. Students also develop ideas that objects can exert forces on each other even though the objects are not in contact, through fields.

Energy Priority Standards

SCI.MS-PS2-3	Ask questions about data to determine the factors that affect the strength of electric and magnetic forces.
SCI.MS-PS2-4	Construct and present arguments using evidence to support the claim that gravitational interactions are attractive and depend on the masses of interacting objects.
SCI.MS-PS2-5	Conduct an investigation and evaluate the experimental design to provide evidence that fields exist between objects exerting forces on each other even though the objects are not in contact.

Energy Learning Goals

- Students will be able to ask questions about data to determine the factors that affect the strength of electric and magnetic forces.
- Students will be able to conduct an investigation to provide evidence that fields exist between objects exerting forces on each other even though the objects are not in contact.
- Students will be able to construct and present arguments using evidence to support the claim that gravitational interactions are attractive and depend on the masses of interacting objects
- Students will be able to evaluate the experimental design to provide evidence that field exist between objects exerting forces on each other even though the objects are not in contact.

Energy Learning Targets

- Students will be able to determine how distance and mass affect gravitational attraction.
- Students will be able to distinguish between and describe electric and magnetic forces.
- Students will be able to distinguish between and describe electric and magnetic forces.
- Students will be able to show that the strength of electricity and magnetism can be affected by similar factors.
- Students will be able to show that the strength of electricity can be affected by different factors such

as voltage or resistance.

- Students will be able to show that the strength of magnetism can be affected by different factors such as material, size, distance, and temperature.
- Students will be able to summarize how a field works and why objects do not need to be in contact.
- Students will be able to summarize how attractive forces work.
- Students will be able to use engineering design to conduct their observation.
- Students will recognize or recall specific vocabulary, including: Electricity, magnetism, proton, electron, neutron, charge, poles, domain, solenoid.
- Students will recognize or recall specific vocabulary, including: orbit, gravity, mass, attractive.
- Students will recognize or recall specific vocabulary, including: Electricity, magnetism, conductor, insulator, current, ampere, voltage, resistance, ohm, poles, domain, solenoid.

Energy Essential Questions

- What evidence can be used to show that gravitational interactions are attractive?
- What factors affect the strength of electric and magnetic forces?
- Where does a field exist between objects exerting forces on each other?

Mazano Elements

- DQ 1-1 Providing Clear Learning Goals and Scales
- DQ 2-6 Identifying Critical Information
- DQ 3-14 Reviewing Content
- DQ 3-16 Using Homework
- DQ 3-19 Practicing Skills, Strategies, and Processes
- DQ 4-21 Organize Students for Cognitively Complex Tasks
- DQ 4-23 Providing Resources and Guidance

Differentiated Instruction

- Have individual students explain content understanding in their own words
- Use a variety of visual aids to help student understanding
- Use different teaching styles to introduce, explain, and reinforce content understanding
- Use small groups to check for understanding.

Assessments

- Do Now Activities
- MS-PS2-3 Learning Scale
- MS-PS2-4 Learning Scale

- MS-PS2-5 Learning Scale
- Teacher-created quizzes
- Teacher-created worksheets
- Unit Benchmark Assessment

Learning Plan

Week	Topic	Lesson Activities	Standard/Learning Goal/Target	Materials
Wk 1	Energy	Do Now Activities (Warm up)	Standard: Conduct an investigation and evaluate the experimental design to provide evidence that fields exist between objects exerting forces on each other even though they are not in contact.	Power Point slides
		Review Power Point slides from online information together.		
Wk 2	Energy	Show videos from You Tube on electric and magnetic fields: https://www.youtube.com/watch?v=zHJkJGBdvwE	Standard: Evaluate the experimental design to provide evidence that fields exist between objects exerting forces on each other even though they are not in contact.	Chrome book <i>Readworks Packet</i>
		https://www.youtube.com/watch?v=uj0DFDfQajw		
		Students will work collaboratively with hands-on materials to conduct an investigation to provide evidence that fields exist between objects without contact.	Learning Goals: Students will be able to conduct an investigation to provide evidence that fields exist between objects exerting forces on each other even though the objects are not in contact.	Videos
		Assign <i>Readworks</i> packet		Worksheets
		Assign student worksheets.		Students will be able to evaluate the

experimental design to provide evidence that field exist between objects exerting forces on each other even though the objects are not in contact.

Learning Targets:

Students will be able to conduct an investigation using magnets, electrically-charged balloons with packing peanuts, and other electrically charged objects to provide evidence that field exist between two objects exerting a force on each other without direct contact.

Students will be able to evaluate data taken from hands-on experiences and simulations to provide evidence that fields exist between objects exerting forces on each other even though the objects are not in contacts.

Do Now Activities (Warm up)

Standard:

Power Point slides

Ask questions about data to determine the factors that affect the strength of electric and

Chrome book

Wk 3 Energy

Review Power Point slides from online information together.

magnetic forces.

Demonstrate how an electromagnet and electric motor are created and how they work.

Videos

Learning Goals:

Students will be able to ask questions about data to determine the factors that affect the strength of electric and magnetic forces.

Electromagnets
Electric motor

Show video from You Tube on electric and magnetic force:

<https://www.youtube.com/watch?v=V7K9EQnVpnM>

<https://www.youtube.com/watch?v=MZtTVsIOA9c>

Worksheets

<https://www.youtube.com/watch?v=HQdLFEiVeCA>

Learning Target:

Students will be able to determine how adding more turns of a wire to an electromagnet and increasing the strength of a magnet in an electric motor will affect the strength of electric and magnetic forces.

Assign student worksheets.

Do Now Activities (Warm up)

Standard:

Power Point slides

Review Power Point slides from online information together.

Construct and present arguments using evidence to support the claim that gravitational interactions are attractive and depend on the masses of interacting objects.

Chrome book

Show video from You Tube on gravity:

<https://www.youtube.com/watch?v=xICEt51A-Ac>

Youtube Video

Wk 4
Energy

Complete chart of statistical information on gravitational interactions of objects in the Solar system together.

Learning Goal:

Students will be able to construct and present arguments using evidence to support the claim that gravitational interactions are attractive and depend on the masses of

Statistical Information Sheet

Practice using the statistical information chart.

Physics website

Use demonstration from Physics website:

interacting objects

<https://phet.colorado.edu/en/simulation/legacy/gravity-and-orbits>

Worksheets

Assign student worksheets.

Learning Target:

Students will be able to utilize an informational chart on gravitational interactions to construct and present arguments to support the claim that gravitational interactions are attractive and depend on the masses of interacting objects

Do Now Activities (Warm up)

Standards:

All unit standards listed above in weeks 1-4.

Power Point slides

Chrome book

Complete a list of review topics in preparation for unit assessment.

Learning Goals:

Students will review and complete multiple assignments in order to be able to pass a standards-based assessment.

Open-note quiz

Standards-based assessment

Complete an open-note quiz.

Wk 5 Energy

Complete a standards review worksheet.

Learning Target:

Students will complete all assignments during the review period and work collaboratively with the teacher to prepare themselves to pass a standards-based assessment.

List of Review Topics

Complete a Unit learning scale on.

Learning Scales:

Complete a standards-based assessment.

MS-PS2-5

MS-PS2-3

Materials & Resources

- Scientific hands-on materials
- Teacher choice of You Tube videos on the content
- Teacher-created Google Documents
- Teacher-created Google Slides
