

Advanced Math Unit 3: Geometry, Volume, and Measurement

Content Area: **Mathematics**
Course(s): **Mathematics 5**
Time Period: **February**
Length: **12 weeks- 60 Instructional Days**
Status: **Published**

Unit Overview

Students will graph points on the coordinate plane to solve real-world and mathematical problems. Students will analyze patterns and relationships through ratio tables, and these patterns will be displayed in a line graph. Conversions of like measurement units within a given system will also be explored. Students will classify polygons into categories based on their properties. Classification of three-dimensional figures and volume of rectangular prisms will also be explored. Getting Ready lessons will cover concepts of sixth grade. This unit will be covered in 12 weeks.

Priority Standards

MATH.5.OA.B.3	Generate two numerical patterns using two given rules. Identify apparent relationships between corresponding terms. Form ordered pairs consisting of corresponding terms from the two patterns, and graph the ordered pairs on a coordinate plane.
MATH.6.NS.B.4	Find the greatest common factor of two whole numbers less than or equal to 100 and the least common multiple of two whole numbers less than or equal to 12. Use the distributive property to express a sum of two whole numbers 1–100 with a common factor as a multiple of a sum of two whole numbers with no common factor.
MATH.6.NS.C.7.a	Interpret statements of inequality as statements about the relative position of two numbers on a number line diagram.
MATH.6.NS.C.7.b	Write, interpret, and explain statements of order for rational numbers in real-world contexts.
MATH.6.EE.A	Apply and extend previous understandings of arithmetic to algebraic expressions
MATH.6.EE.A.1	Write and evaluate numerical expressions involving whole-number exponents.
MATH.6.EE.A.2	Write, read, and evaluate expressions in which letters stand for numbers.
MATH.6.EE.A.2.a	Write expressions that record operations with numbers and with letters standing for numbers. For example, express the calculation “Subtract y from 5” as $5 - y$.
MATH.6.EE.A.2.b	Identify parts of an expression using mathematical terms (sum, term, product, factor, quotient, coefficient); view one or more parts of an expression as a single entity. For example, describe the expression $2(8 + 7)$ as a product of two factors; view $(8 + 7)$ as both a single entity and a sum of two terms.
MATH.6.EE.A.2.c	Evaluate expressions at specific values of their variables. Include expressions that arise from formulas used in real-world problems. Perform arithmetic operations, including those involving whole number exponents, in the conventional order when there are no

	parentheses to specify a particular order (Order of Operations).
MATH.5.M.A	Convert like measurement units within a given measurement system For example, use the formulas $V = 6s^3$ and $A = 6s^2$ to find the volume and surface area of a cube with sides of length $s = 1/2$.
MATH.6.EE.A.3	Apply the properties of operations to generate equivalent expressions.
MATH.5.M.A.1	Convert among different-sized standard measurement units within a given measurement system (e.g., convert 5 cm to 0.05 m), and use these conversions in solving multi-step, real world problems.
MATH.5.M.B	Geometric measurement: understand concepts of volume and relate volume to multiplication and to addition
MATH.5.M.B.2	Recognize volume as an attribute of solid figures and understand concepts of volume measurement.
MATH.5.M.B.2.a	A cube with side length 1 unit, called a “unit cube,” is said to have “one cubic unit” of volume, and can be used to measure volume.
MATH.5.M.B.2.b	A solid figure which can be packed without gaps or overlaps using n unit cubes is said to have a volume of n cubic units.
MATH.5.M.B.3	Measure volumes by counting unit cubes, using cubic cm, cubic in, cubic ft, and non-standard units.
MATH.5.M.B.4	Relate volume to the operations of multiplication and addition and solve real world and mathematical problems involving volume.
MATH.5.M.B.4.a	Find the volume of a right rectangular prism with whole-number side lengths by packing it with unit cubes, and show that the volume is the same as would be found by multiplying the edge lengths, equivalently by multiplying the height by the area of the base. Represent threefold whole-number products as volumes, e.g., to represent the associative property of multiplication.
MATH.5.M.B.4.b	Apply the formulas $V = l \times w \times h$ and $V = b \times h$ for rectangular prisms to find volumes of right rectangular prisms with whole-number edge lengths in the context of solving real world and mathematical problems.
MATH.5.M.B.4.c	Recognize volume as additive. Find volumes of solid figures composed of two non-overlapping right rectangular prisms by adding the volumes of the non-overlapping parts, applying this technique to solve real world problems.
MATH.5.G.A	Graph points on the coordinate plane to solve real-world and mathematical problems
MATH.5.G.A.2	Represent real world and mathematical problems by graphing points in the first quadrant of the coordinate plane, and interpret coordinate values of points in the context of the situation.
MATH.5.G.B	Classify two-dimensional figures into categories based on their properties
MATH.5.G.B.3	Understand that attributes belonging to a category of two-dimensional figures also belong to all subcategories of that category.
MATH.5.G.B.4	Classify two-dimensional figures in a hierarchy based on properties.

Unit Learning Goals & Targets

CCS Priority Standards

MA.5.5.G.A Graph points on the coordinate plane to solve real-world and mathematical problems.

MA.5.5.G.A.1 Use a pair of perpendicular number lines, called axes, to define a coordinate system, with the intersection of the lines, called the origin, located by using an ordered pair of numbers, called its coordinates. Understand that the first number indicates how far to travel from the origin in the direction of the first axis (x-axis x coordinate and y-axis y coordinate).

MA.5.5.G.A.2 Represent real world and mathematical problems by graphing points in the first quadrant of the coordinate plane, and interpret the coordinates in terms of the real world or mathematical problem.

MA.5.5.G.B Classify two-dimensional figures into categories based on their properties.

MA.5.5.G.B.3 Understand that attributes belonging to a category of two-dimensional figures also belong to all subcategories of that cat

MA.5.5.G.B.4 Classify two-dimensional figures in a hierarchy based on properties.

MA.5.5.MD.A Convert like measurement units within a given measurement system.

MA.5.5.MD.A.1 Convert among different-sized standard measurement units within a given measurement system (eg., convert 5 cm. to

MA.5.5.MD.B Represent and interpret data.

MA.5.5.MD.B.2 Make a line plot to represent a data set in measurements in fractions of a unit ($\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$). Use operations on fractions

MA.5.5.MD.C Geometric measurement: understand concepts of volume and relate volume to multiplication and to addition.

MA.5.5.MD.C.3 Recognize volume as an attribute of solid figures and understand concepts of volume measurement.

MA.5.5.MD.C.3a A cube with side length 1 unit, "called a unit cube," is said to have "one cubic unit" of volume, and can be used to m

MA.5.5.MD.C.3b A solid figure which can be packed without gaps or overlaps using n unit cubes is said to have a volume of n cubic u

MA.5.5.MD.C.4 Measure volumes by counting unit cubes using cubic cm., cubic in., cubic ft., and non-standard units.

MA.5.5.MD.C.5 Relate volume to the operations of multiplication and addition and solve real world and mathematical problems invol

MA.5.5.MD.C.5a Find the volume of a right rectangular prism with whole-number side lengths by packing it with unit cubes, and show equivalently by multiplying the height by the area of the base. Represent threefold whole-number products as volume

MA.5.5.MD.C.5b Apply the formulas $V = l \times w \times h$ and $V = B \times h$ for rectangular prisms to find volumes of right rectangular prisms w problems.

MA.5.5.MD.C.5c Recognize volume as additive. Find volumes of solid figures composed of two non-overlapping right rectangular prisms in real world problems.

MA.5.5.OA.B.3 Generate two numerical patterns using two given rules. Identify apparent relationships between corresponding terms. Plot the ordered pairs on a coordinate plane.

MA.6.EE.A.3 Apply the properties of operations to generate equivalent expressions.

MA.6.EE.A.4 Identify when two expressions are equivalent.

6.NS.B.4 Find the greatest common factor of two whole numbers less than or equal to 100 and the least common multiple of two whole numbers 1-100 with a common factor as a multiple of a sum of two whole numbers with no common factor.

6.EE.A.2a Write expressions that record operations with numbers and with letters standing for numbers.

6.EE.A.2b Identify parts of an expression using mathematical terms (sum, term, product, factor, quotient, coefficient); view one or mo

6.EE.A.2c Evaluate expressions at specific values of their variables. Include expressions that arise from formula those involving whole-number exponents, in the conventional order when there are no parentheses to specify a p:

Essential Questions

- How can a line plot help you find an average with data given in fractions?
- How can you apply the properties of operations to generate equivalent expressions?
- How can you identify when two expressions are equivalent ?
- How can you classify and compare quadrilaterals?
- How can you classify triangles?
- How can you compare and convert customary units of capacity?
- How can you compare and convert customary units of length?
- How can you compare and convert customary units of weight?
- How can you compare and convert metric units?
- How can you find the volume of a rectangular prism?
- How can you find the volume of rectangular prisms that are combined?
- How can you identify a relationship between two numerical patterns?
- How can you identify and classify polygons?
- How can you identify and plot points on a coordinate grid?
- How can you identify, describe, and classify three-dimensional figures?
- How can you solve elapsed time problems by converting units of time?
- How can you solve multistep problems that include measurement conversions?
- How can you use a coordinate grid to display data collected in an experiment?
- How can you use a formula to find the volume of a rectangular prism?
- How can you use a line graph to display and analyze real-world data?
- How can you use an everyday object to estimate the volume of a rectangular prism?

- How can you use the strategy "act it out" to approximate whether the sides of a figure are congruent?
- How can you use the strategy "make a table" to compare different rectangular prisms with the same volume?
- How can you use the strategy "make a table" to help you solve problems about customary and metric conversions?
- How can you use the strategy "solve a simpler problem" to help you solve a problem with patterns?
- How can you use unit cubes to find the volume of a rectangular prism?
- How can you write and graph ordered pairs on a coordinate grid using two numerical patterns?
- What is a unit cube, and how can you use it to build a solid figure?
