# Unit 2 (Ch 5-8 \& 10) 

| Content Area: | Mathematics |
| :--- | :--- |
| Course(s): | Mathematics $\mathbf{4}$ |
| Time Period: | December |
| Length: | $\mathbf{6 7}$ days (including $\mathbf{2}$ days for iReady testing) |
| Status: | Published |

## Unit \#2 Overview

The students will be working on:

Divide Multi-Digit Numbers by One-Digit Numbers
Factors, Multiples, and Patterns
Understand Fraction Equivalence and Comparison
Add and Subtract Fractions
Relate Fractions and Decimals

## Priority Standards

MATH.4.OA.A. 3

MATH.4.OA.B. 4

MATH.4.OA.C. 5

MATH.4.NBT.A. 1

MATH.4.NBT.B. 6

MATH.4.NF.A. 1

Solve multi-step word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.

Find all factor pairs for a whole number in the range 1-100. Recognize that a whole number is a multiple of each of its factors. Determine whether a given whole number in the range $1-100$ is a multiple of a given one-digit number. Determine whether a given whole number in the range $1-100$ is prime or composite.

Generate a number or shape pattern that follows a given rule. Identify apparent features of the pattern that were not explicit in the rule itself.

Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right.

Find whole-number quotients and remainders with up to four-digit dividends and onedigit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area model.

Explain why a fraction $a / b$ is equivalent to a fraction $(n \times a) /(n \times b)$ by using visual fraction models, with attention to how the number and size of the parts differ even though the two fractions themselves are the same size. Use this principle to recognize and generate equivalent fractions.
\(\left.$$

## Learning Targets

- I can compare 2 fractions by creating equivalent fractions with a common denominator (if needed).
- Lesson 10-1: I can write a fraction or mixed number involving tenths as a decimal.
- Lesson 10-2: I can write a fraction or mixed number involving hundredths as a decimal.
- Lesson 10-3: I can write tenths and hundredths as equivalent fractions and decimals.
- Lesson 10-4: I can compare decimals to the hundredths place.
- Lesson 10-5: I can use equivalent fractions to add decimal fractions and decimals.
- Lesson 10-6: I can write amounts of money in different ways.
- Lesson 10-7: I can add, subtract, multiply, and divide amounts of money
- Lesson 5-1: I can use place value to divide tens, hundreds, or thousands.
- Lesson 5-2: I can use division facts and compatible numbers to estimate quotients.
- Lesson 5-3: I can use models to find quotients and remainders.
- Lesson 5-4: I can use partial quotients to divide.
- Lesson 5-5: I can use partial quotients to divide and find remainders.
- Lesson 5-6: I can divide two-digit numbers by one-digit numbers.
- Lesson 5-7: I can divide multi-digit numbers by one-digit numbers.
- Lesson 5-8: I can divide by one-digit numbers.
- Lesson 5-9: I can solve multi-step word problems involving division.
- Lesson 6-1: I can use models to find factor pairs.
- Lesson 6-2: I can use division to find factor pairs.
- Lesson 6-3: I can understand the relationship between factors and multiples.
- Lesson 6-4: I can tell whether a given number is prime or composite.
- Lesson 6-5: I can create and describe number patterns.
- Lesson 6-6: I can create and describe shape patterns.
- Lesson 7-1: I can model and write equivalent fractions.
- Lesson 7-2: I can use multiplication to find equivalent fractions.
- Lesson 7-3: I can use division to find equivalent fractions.
- Lesson 7-4: I can compare fractions using benchmarks.
- Lesson 7-5: I can compare fractions using equivalent fractions.
- Lesson 8-1: I can use area models and number lines to add fractions.
- Lesson 8-2: I can write a fraction as a sum of fractions.
- Lesson 8-3: I can add fractions with like denominators.
- Lesson 8-4: I can use area models and number lines to subtract fractions.
- Lesson 8-5: I can subtract fractions with like denominators.
- Lesson 8-6: I can write mixed numbers as fractions and fractions as mixed numbers.
- Lesson 8-7: I can add mixed numbers with like denominators.
- Lesson 8-8: I can subtract mixed numbers with like denominators.
- Lesson 8-9: I can solve multi-step word problems involving fractions and mixed numbers.

## Essential Questions

- How are factors and multiples related?
- How are fractions and decimals related?
- How can different fractions name the same amount?
- How can I generate equivalent fractions?
- How can I identify and extend patterns?
- How does division affect numbers?
- What is fraction equivalence?
- What strategies can I use to add or subtract fractions?
- What strategies can I use to compare fractions?

## Materials and Resources

- Big Ideas Online digital platform
- Big Ideas Workbook Volume 1
- Common Core Quick Check (Printable)
- Exit Tickets
- Foldables
- Hands-On Manipulatives
- iReady platform 40 minutes/week with individual paths for each student
- Problem of the Day (Printable)
- Reflex Math
- Visual Vocabulary Cards
- Weekly Calendar

## Unit Assessments (Required)

- Big Ideas Chapter 10 Assessment Form B
- Big Ideas Chapter 5 Assessment Form B
- Big Ideas Chapter 6 Assessment Form B
- Big Ideas Chapter 7 Assessment Form B
- Big Ideas Chapter 8 Assessment Form B

## Unit Assessments (Optional)

- Big Ideas Chapter Assessments Form A
- Big Ideas Created Assessment: Course Benchmark \# 2 (for use after Chapter 7)
- Journal Writing
- Standardized Test Practice (NJSLA released items/iReady platform)
- Teacher Created Assessments/Exit Tickets Big Ideas
